Door Scheduling Software

Intec Systems, established since 1981, have dedicated over 20 years to the Architectural Ironmongery Industry, and enjoy an extremely good and enviable reputation.

We have now launched our new version of the Intec Door Scheduling Software, linked to a number of different business solutions including VISION for the Architectural Ironmonger.

We can offer an integrated suite of financials, stock control, sales and purchase order processing, door scheduling, quotations and trade counter / epos facilities. Unique features for the Architectural Ironmongery industry include control of specials, trade counter activity and contract management.

Download your free demo version our door scheduling software: **www.doorscheduling.com**

System Features

- Provides clients and Architects with professional industry standard
- documentation.
- Option to hide your part numbers and descriptions stop your competitors breaking your specification.
- Automatic control of specials.
- Printing of master schedule details with or without prices.
- Communicate with your customers and suppliers easily through fax, post or email, schedules being sent automatically if required.
- Attach pictures and technical specifications to your products.
- Automatic import and updates of product information from your suppliers.

First the project master information is recorded, this information is then used to generate various management information reports in addition to the master schedules and quotations. Various type of project can be created, House Type Schedules, Standard Schedules (set by set), and Quotations/Bills of Quantities.

The products being used in the project can then be added either in advance of creating sets of hardware, or as the set is being setup. Products can be selected from pre-loaded manufacturers data, your own database, or by setting up specials at the time of entry. Pictures and technical specifications can be added to the product database.

Product Code: 111601.130P2 Clerit (External) Information Product Code: Information Description Self Unit Description Description Product Code: Description Self Network Description Self Network

The product form is particularly useful for substituting a product when re-quoting for a different finish etc. One simple selection replaces a product throughout the schedule.

The sets of hardware may be created individually, copied from within the existing schedule or copied from another schedule. Specials can be created at any point.
